

How To: Make a dome with figures inside

© Thelma Levett 2013

Tie a knotted scrap of balloon to the bottom of the figure. Inflate the tip end of a clear 646 balloon to about 12". Push the figure head first into the clear balloon.

You may need to apply a little pressure to the other end of the bubble to stop the air to the other end of the balloon. Once the figures are in just cut the balloon as shown.

The figures will now be inside two layers of balloon so pull the top layer over the figures so they are inside a single layer.

Take hold of the scrap that was tied to the bottom of the figures. Inflate the clear balloon as above with a small tip and tie the end. Thread the ends through a cd. Make sure the cd is shiny side up.

Push the CD up into the clear balloon until the tip end of the clear balloon is stretched out.

Once you have done this the clear balloon will fold over the CD to make a dome shape

Push the lip of an 11" or 12" round balloon through the hole in another CD.

Inflate the round balloon.

Place the round balloon onto a flat surface and push the cd down at the same time as letting the air SLOWLY out of the round balloon.

Keep the cd level. When you feel it make contact with the flat surface, don't be tempted to take the pressure off. You will feel air is still escaping. Just make sure to keep it flat and the balloon central.

You will feel when the air has locked in and no more air will escape. When you feel this you can take your hand off. This is how it should look.

Now it is a simple matter of tying the base of the dome to the lip of the CD base.
